General description	
<p>The FLIR T1050sc is designed for the expert requiring the highest performance and the latest technology available. The camera combines excellent ergonomics and feature-rich flexibility with superior image quality at an infrared resolution of 1024 × 768 pixels. High accuracy and sensitivity together with radiometric recording and streaming options make the FLIR T1050sc well suited for advanced research and development.</p>	
<p>Benefits:</p> <ul style="list-style-type: none"> • Tailor made for research and development: The FLIR T1050sc has high accuracy and high sensitivity, to accurately measure the smallest temperature differences. With real-time radiometric recording, it is possible to capture fast events on the camera's SD card for further analysis by the supplied analysis software. • Flexible and feature rich: A wide variety of measuring and analysis functions make the FLIR T1050sc flexible for your every need. Two programmable buttons provide easy access to favorite functions. • Highest performance with the latest technology: The FLIR T1050sc is equipped with the innovative Multi Spectral Dynamic Imaging (MSX) feature, which produces an image richer in detail than ever before. With its continuous autofocus, the FLIR T1050sc is a fully automatic infrared camera. • Support for UltraMax: When enabling UltraMax in the camera, the resolution of images can be substantially enhanced when importing the images into FLIR Tools.

Part number	TG165
Part name	Imaging IR Thermometer
Description	<p>FLIR's new TG165 imaging infrared (IR) thermometer bridges the gap between single-spot IR thermometers and FLIR's legendary thermal cameras. Equipped with FLIR's exclusive Lepton micro thermal camera, the FLIR TG165 shows you where potential problems are brewing and where to aim your spot.</p> <p>The FLIR TG165 lets you see heat patterns, reliably measure temperature, and store images and data. Its menu uses intuitive icons, making it simple to operate. The FLIR TG165 also makes documentation easy by saving images you can download from the micro-SD card or over a USB connection and use for reports.</p> <p>With a spot ratio of 24:1, dual laser pointers, and a wide temperature range from 13–716°F (–25 to 380°C), the FLIR TG165 helps you to capture reliable readings from safer distances.</p> <ul style="list-style-type: none"> • See the heat and speed up troubleshooting. • Know where to measure temperature. • Grab and go simplicity—no special training required. • Pocket portable to fit a crowded tool bag. • Rugged and reliable.

IR temperature measurement	
Basic accuracy	±1.5% or 1.5°C
Basic range	–25 to 380°C (14–716°F)
Detailed ranges and accuracy	–25 to –10°C ± 3°C (–13 to 14°F ± 5°F) –10 to 0°C ± 2.0°C (–14–32°F ± 4°F) 0–380°C ±1.5°C or 1.5%, whichever is greater (32–716°F ± 3% or 3°F, whichever is greater)
Emissivity	4 pre-set levels with custom adjustment of 0.1–0.99
Distance to spot ratio (D:S)	24:1
Measurement resolution	0.1°C/°F
Response time	150 ms
Spectral response	8–14 μm
Lasers	Dual diverging lasers indicate the temperature measurement area, activated by pulling the trigger

IR temperature measurement	
Calibration	Soft button multi-point by authorized FLIR service center
IR temperature resolution	0.1°C
IR temperature response time	<150 ms
IR thermometer measurement acquisition	Continuous scanning
Emissivity	4 presets, adjustable from 0.1 to 0.99
IR thermometer spectral range	8–14 μm
Minimum measurement distance	26 cm (10")

Thermal imaging	
Imaging detector	FLIR Lepton, microbolometer focal plane array
Shutter	Integrated automatic shutter for auto flat field correction
Image resolution (H × W)	4800 pixels (80 × 60)
Spectral response	8–14 μm
Field of view (H × W)	50° × 38.6°
Upper scene range	127°C, 260°F (400K)
Sensitivity	<150mK
Image update speed frequency	9 Hz
Thermal image palettes	2: hot-iron and gray-scale
Thermal image minimum focus distance	10 cm (4")

Power system	
Battery	3.7 V, 2600 mA h lithium ion battery, rechargeable via micro USB
Auto power off	Adjustable with disable
Battery charge life	30 days minimum
Battery life	8 hours continuous scanning with lasers
Charging time	90% at 4 hours, 100% at 6 hours

Image storage	
Memory type	Micro SD card accessible via top flap
Saved image format	Bitmap (BMP) image with temperature and emissivity
Image storage capacity	75 000 pictures with included 8 GB SD card
Memory expansion	32 GB SD card maximum
File format	BMP with temperature values overlaid

General information	
Display type	2.0" TFT LCD
Display resolution (W × H)	38 720 pixels (176 × 220)
Tripod mount	1/4"-20 on handle bottom
Warranty	2 years product, 10 years thermal imaging detector
Calibration	Multi-point by authorized FLIR service center

General description	
<p>FLIR's new TG167 imaging infrared (IR) thermometer bridges the gap between single-spot IR thermometers and FLIR's legendary thermal cameras. Equipped with FLIR's exclusive Lepton micro thermal camera, the FLIR TG167 shows you where potential problems are brewing and where to aim your spot.</p> <p>The FLIR TG167 lets you see heat patterns, reliably measure temperature, and store images and data. Its menu uses intuitive icons, making it simple to operate. The FLIR TG167 also makes documentation easy by saving images you can download from the Micro SD card or over a USB connection and use for reports.</p>	
Key features	
<ul style="list-style-type: none"> • See the heat and speed up troubleshooting. • Know where to measure temperature. • Grab and go simplicity—no special training required. • Pocket portable to fit a crowded tool bag. • Rugged and reliable.

General description

The FLIR BHP SDK allows users of A6600/A6200sc/A6700sc/A8300sc/SC6x00/SC8x00/RS6700 series cameras to integrate camera control and GigE data streaming into their own applications.

The BHP SDK provides C/C++ functions to control all available camera operations. The SDK is in the form of a Visual Studio project that includes integrated help and many example programs to demonstrate how to use the various functions.

Main features:

- Supplies functions for all camera control features.
- Functions for GigE streaming.
- Functions for accessing temperature-calibrated data.
- Designed specifically for Visual Studio 2012 but Visual Studio 2008, 2010, and 2013 are supported.
- C#.NET wrappers are included.
- Integrated help.
- A large amount of sample code is provided.

General description

FLIR ResearchIR Max + HSDR 4 contains all the features of FLIR ResearchIR Max 4, plus support for FLIR High Speed Data Recorder (HSDR) products.

Main features:

- Pre/post-recording.
- Mathematical processing toolbox.
- Image filtering toolbox.
- Radiometric digital detail enhancement (DDE) improves dramatically the understanding of the thermal image, while maintaining radiometric measurement accuracy.
- View, record and store images at high speed.
- Post-processing of fast thermal events.
- Generate time-temperature plots from live images or recorded sequences.
- Advanced start/stop recording conditions.
- Unlimited number of analysis functions (spot, line, area).
- File organizer.
- Zoom and pan allows a closer look.
- Multiple dockable objects for plots and statistics.
- Export images and results to bitmap, video, Excel, MATLAB or CSV formats
- Local scale gain control on measurement - automatically adjusts the contrast in a specific part of the image.

FLIR ResearchIR Max + HSDR 4 in combination with a FLIR thermal imaging camera is the perfect solution for any R&D or scientific application. It will allow researchers in all fields to make the smallest of temperature differences visible and to thoroughly analyze the thermal process in real-time.

General description

FLIR ResearchIR Max + HSDR 4 contains all the features of FLIR ResearchIR Max 4, plus support for FLIR High Speed Data Recorder (HSDR) products.

Main features:

- Pre/post-recording.
- Mathematical processing toolbox.
- Image filtering toolbox.
- Radiometric digital detail enhancement (DDE) improves dramatically the understanding of the thermal image, while maintaining radiometric measurement accuracy.
- View, record and store images at high speed.
- Post-processing of fast thermal events.
- Generate time-temperature plots from live images or recorded sequences.
- Advanced start/stop recording conditions.
- Unlimited number of analysis functions (spot, line, area).
- File organizer.
- Zoom and pan allows a closer look.
- Multiple dockable objects for plots and statistics.
- Export images and results to bitmap, video, Excel, MATLAB or CSV formats

General description

FLIR ResearchIR Max 4 is aimed at R&D and science professionals who use thermal imaging cameras with a cooled or uncooled detectors. FLIR ResearchIR Max makes the most of a thermal imaging camera, and allows high-speed recording and advanced thermal pattern analysis. FLIR ResearchIR Max is the perfect tool for industrial R&D.

Main features:

- Pre/post-recording.
- Mathematical processing toolbox.
- Image filtering toolbox.
- Radiometric digital detail enhancement (DDE) improves dramatically the understanding of the thermal image, while maintaining radiometric measurement accuracy.
- View, record and store images at high speed.
- Post-processing of fast thermal events.
- Generate time-temperature plots from live images or recorded sequences.
- Advanced start/stop recording conditions.
- Unlimited number of analysis functions (spot, line, area).
- File organizer.
- Zoom and pan allows a closer look.
- Multiple dockable objects for plots and statistics.
- Export images and results to bitmap, video, Excel, MATLAB or CSV formats
- Local scale gain control on measurement - automatically adjusts the contrast in a specific part of the image.

FLIR ResearchIR Max 4 in combination with a FLIR thermal imaging camera is the perfect solution for any R&D or scientific application. It will allow researchers in all fields to make the smallest of temperature differences visible and to thoroughly analyze the thermal process in real-time.

General description

FLIR ResearchIR Max 4.0 is aimed at R&D and science professionals who use thermal imaging cameras with a cooled or uncooled detectors. FLIR ResearchIR Max makes the most of a thermal imaging camera, and allows high-speed recording and advanced thermal pattern analysis. FLIR ResearchIR Max is the perfect tool for industrial R&D.

Main features:

- Pre/post-recording.
- Mathematical processing toolbox.
- Image filtering toolbox.
- Radiometric digital detail enhancement (DDE) improves dramatically the understanding of the thermal image, while maintaining radiometric measurement accuracy.
- View, record and store images at high speed.
- Post-processing of fast thermal events.
- Generate time-temperature plots from live images or recorded sequences.
- Advanced start/stop recording conditions.
- Unlimited number of analysis functions (spot, line, area).
- File organizer.
- Zoom and pan allows a closer look.
- Multiple dockable objects for plots and statistics.
- Export images and results to bitmap, video, Excel, MATLAB or CSV formats
- Local scale gain control on measurement - automatically adjusts the contrast in a specific part of the image.

FLIR ResearchIR Max 4 in combination with a FLIR thermal imaging camera is the perfect solution for any R&D or scientific application. It will allow researchers in all fields to make the smallest of temperature differences visible and to thoroughly analyze the thermal process in real-time.

General description
FLIR ResearchIR Max 4 is aimed at R&D and science professionals who use thermal imaging cameras with a cooled or uncooled detectors. FLIR ResearchIR Max makes the most of a thermal imaging camera, and allows high-speed recording and advanced thermal pattern analysis. FLIR ResearchIR Max is the perfect tool for industrial R&D.
Main features:
<ul style="list-style-type: none"> • Pre/post-recording. • Mathematical processing toolbox. • Image filtering toolbox. • Radiometric digital detail enhancement (DDE) improves dramatically the understanding of the thermal image, while maintaining radiometric measurement accuracy. • View, record and store images at high speed. • Post-processing of fast thermal events. • Generate time-temperature plots from live images or recorded sequences. • Advanced start/stop recording conditions. • Unlimited number of analysis functions (spot, line, area). • File organizer. • Zoom and pan allows a closer look. • Multiple dockable objects for plots and statistics. • Export images and results to bitmap, video, Excel, MATLAB or CSV formats • Local scale gain control on measurement - automatically adjusts the contrast in a specific part of the image.
FLIR ResearchIR Max 4 in combination with a FLIR thermal imaging camera is the perfect solution for any R&D or scientific application. It will allow researchers in all fields to make the smallest of temperature differences visible and to thoroughly analyze the thermal process in real-time.

General description
<p>Software to manage and control FLIR Systems thermal imaging cameras for security and safety applications</p> <p>FLIR Sensors Manager offers powerful and efficient management capabilities for any security installation with FLIR Systems thermal imaging cameras. FLIR Sensors Manager allows to automatically locate FLIR Systems thermal imaging cameras in the network and to easily control them. Just connect the thermal imaging camera to the network, install FLIR Sensors Manager and hit the "discover" button and you will be able to manage and control the camera. Thanks to FLIR Sensors Manager, the management of FLIR Systems thermal imaging cameras over a network will become extremely easy.</p> <p>FLIR Sensors Manager does not only allow controlling F-, PT- and D-Series thermal imaging cameras. It is also suited for managing thermal imaging cameras with temperature capabilities like the FLIR A310 f and FLIR A310 pt.</p> <p>FLIR Sensors Manager allows you to get the most out of your thermal imaging camera with temperature measurement capability. It is ideal for monitoring critical infrastructure and for preventing fires.</p> <p>FLIR Sensors Manager allows to automatically locate FLIR A310 pt and FLIR A310 f cameras in the network. They can be easily controlled and set-up in a distributed multi-camera environment</p>
<p>FLIR Sensors Manager is available in two different versions: Basic (freeware) and Pro. Depending on your exact needs and your security network, you can choose the version that best fits your system's requirements. A free demo version is available and can be downloaded from our website. After registration, the demo version is converted to the basic version.</p>
<p>The Basic version of FLIR Sensors Manager (freeware) allows to:</p> <ul style="list-style-type: none"> • Discover sensors in the network • Command and control of up to four networked sensors: focus, pan/tilt, zoom • Display network video • Define presets • Manage scan lists • Create panoramas • Configure user profiles(toolbars, layout, etc) • Show thermal images on multiple monitors • Capture images • Geo Mapping
<p>The Pro version of FLIR Sensors Manager contains all the features that are incorporated in the Basic version, plus a number of useful modes that will help you make the most out of your security network.</p>

General description

Video analytics

Allows to perform video analytics within FLIR Sensors Manager. It includes:

- Video Motion Detection: FLIR's pro proprietary algorithm will work on thermal or visible video in the most harsh environments.
- Target detection with alarms based on spatial rules like trip wires crossing or areas triggered by enter, exit or both events.
- Software based video-tracking of moving objects for control of PTZ sensors.

Radar Cueing and radar tracks display

Allows display of real-time position and classification information of radar targets (ID, course, speed, lat/lon, classification, ...) coming from Nexus enabled radars. Allows users to command cameras in advanced radar slave modes (ARPA tracking).

Video wall display

Allows fully configurable video mosaic layouts, supporting both network and analog frame grabber sources. E-stab Provides a steady image. Can be extremely useful when cameras are installed on high poles where they can be affected by wind or vibration.

General description	
ThermoVision™ System Developers Kit	
Key features:	
<ul style="list-style-type: none"> • Supports communication and broadcasting via FireWire™, Ethernet, and USB interfaces. • Gives the user full control of the camera. • Allows the user to set alarm conditions and measurement functions in the camera • Allows the user to define I/O functionality (FLIR A series). • Based on ActiveX technology. • Supports acquisition of images through FireWire™, Ethernet, and USB interfaces. • Reads from and writes to file in FLIR Systems' proprietary file format and writes to files in FLIR Systems' open floating point format (*.fpf). • Converts 16-bit absolute pixels into temperature pixels and several intermediate types of pixels formats, for maximum user flexibility. Applies to all camera models with temperature measurement capabilities. • Allows 16-bit temperature linear outputs from FLIR A series cameras. • Includes method that allows using individual emissivity value correction on any single pixel or condensed measuring value – e.g. average, minimum etc. • Supports conditional recording to file through FireWire™, Ethernet, and USB interfaces.

General description

FLIR Tools Mobile lets professional thermographers use an iPad, iPhone, or iPod touch to see and capture live, streaming infrared video and stills from select FLIR cameras.

With FLIR Tools Mobile the camera can be stationed in one area and operated wirelessly from another – highly useful for IR inspections of energized equipment or performing IR surveys in hard-to-reach locations and harsh working environments. Streaming video and remote access also gives decision makers and others on your team a valuable opportunity to observe and collaborate in the thermal imaging process.

Using FLIR Tools Mobile, you can do one or more of the following:

- Import images from your infrared camera
- Lay out and move measurement tools on the image
- Read out temperature measurements
- Zoom in on images
- On the iPhone/iPad, remotely take snapshots when a camera is connected
- On the camera, take snapshots that will automatically be saved in the iPhone/iPad
- Delete any images on the iPhone/iPad
- Display an image's GPS coordinates on Google Maps
- Create and e-mail imagesheets
- Create and e-mail reports
- Print imagesheets and reports to any AirPrint-enabled printer
- Save images to iPhone/iPad photo library
- Send images to FTP sites and other file sharing services (Dropbox, Box.net, etc.)
- Display image information, such as object parameters, text comments, file information, etc.
- Play-back voice comments
- Change level and span
- Change general settings in the app
- Change palette

FLIR Tools Mobile lets you take control of the following features on selected cameras:

- Remote control of your FLIR camera.
- Support for MSX (Multi-Spectral Dynamic Imaging) images.
- Support for sketch images in both IR and visual with on/off toggling.
- Support for same FOV ("Field of View Match").
- Editable text comments.
- Auto and manual focus
- Level and span
- Color palettes
- Temperature measurement analytics
- Spot
- Area box
- Circle
- Line
- Parameter settings
- Emissivity
- Reflected temperature
- Relative humidity
- Atmospheric temperature
- IR and visible light image blending
- Picture-in-picture
- Thermal fusion
- Image storage
- MPEG 4 video
- Radiometric JPEG stills

General description

FLIR ResearchIR Max + HSDR 4 contains all the features of FLIR ResearchIR Max 4, plus support for FLIR High Speed Data Recorder (HSDR) products.

Main features:

- Pre/post-recording.
- Mathematical processing toolbox.
- Image filtering toolbox.
- Radiometric digital detail enhancement (DDE) improves dramatically the understanding of the thermal image, while maintaining radiometric measurement accuracy.
- View, record and store images at high speed.
- Post-processing of fast thermal events.
- Generate time-temperature plots from live images or recorded sequences.
- Advanced start/stop recording conditions.
- Unlimited number of analysis functions (spot, line, area).
- File organizer.
- Zoom and pan allows a closer look.
- Multiple dockable objects for plots and statistics.
- Export images and results to bitmap, video, Excel, MATLAB or CSV formats
- Local scale gain control on measurement - automatically adjusts the contrast in a specific part of the image.

FLIR ResearchIR Max + HSDR 4 in combination with a FLIR thermal imaging camera is the perfect solution for any R&D or scientific application. It will allow researchers in all fields to make the smallest of temperature differences visible and to thoroughly analyze the thermal process in real-time.

General description

FLIR ResearchIR Max + HSDR 4 contains all the features of FLIR ResearchIR Max 4, plus support for FLIR High Speed Data Recorder (HSDR) products.

Main features:

- Pre/post-recording.
- Mathematical processing toolbox.
- Image filtering toolbox.
- Radiometric digital detail enhancement (DDE) improves dramatically the understanding of the thermal image, while maintaining radiometric measurement accuracy.
- View, record and store images at high speed.
- Post-processing of fast thermal events.
- Generate time-temperature plots from live images or recorded sequences.
- Advanced start/stop recording conditions.
- Unlimited number of analysis functions (spot, line, area).
- File organizer.
- Zoom and pan allows a closer look.
- Multiple dockable objects for plots and statistics.
- Export images and results to bitmap, video, Excel, MATLAB or CSV formats
- Local scale gain control on measurement - automatically adjusts the contrast in a specific part of the image.

FLIR ResearchIR Max + HSDR 4 in combination with a FLIR thermal imaging camera is the perfect solution for any R&D or scientific application. It will allow researchers in all fields to make the smallest of temperature differences visible and to thoroughly analyze the thermal process in real-time.

General description

FLIR ResearchIR Max 4 is aimed at R&D and science professionals who use thermal imaging cameras with a cooled or uncooled detectors. FLIR ResearchIR Max makes the most of a thermal imaging camera, and allows high-speed recording and advanced thermal pattern analysis. FLIR ResearchIR Max is the perfect tool for industrial R&D.

Main features:

- Pre/post-recording.
- Mathematical processing toolbox.
- Image filtering toolbox.
- Radiometric digital detail enhancement (DDE) improves dramatically the understanding of the thermal image, while maintaining radiometric measurement accuracy.
- View, record and store images at high speed.
- Post-processing of fast thermal events.
- Generate time-temperature plots from live images or recorded sequences.
- Advanced start/stop recording conditions.
- Unlimited number of analysis functions (spot, line, area).
- File organizer.
- Zoom and pan allows a closer look.
- Multiple dockable objects for plots and statistics.
- Export images and results to bitmap, video, Excel, MATLAB or CSV formats
- Local scale gain control on measurement - automatically adjusts the contrast in a specific part of the image.

FLIR ResearchIR Max 4 in combination with a FLIR thermal imaging camera is the perfect solution for any R&D or scientific application. It will allow researchers in all fields to make the smallest of temperature differences visible and to thoroughly analyze the thermal process in real-time.

General description
FLIR ResearchIR Max 4 is aimed at R&D and science professionals who use thermal imaging cameras with a cooled or uncooled detectors. FLIR ResearchIR Max makes the most of a thermal imaging camera, and allows high-speed recording and advanced thermal pattern analysis. FLIR ResearchIR Max is the perfect tool for industrial R&D.
Main features:
<ul style="list-style-type: none"> • Pre/post-recording. • Mathematical processing toolbox. • Image filtering toolbox. • Radiometric digital detail enhancement (DDE) improves dramatically the understanding of the thermal image, while maintaining radiometric measurement accuracy. • View, record and store images at high speed. • Post-processing of fast thermal events. • Generate time-temperature plots from live images or recorded sequences. • Advanced start/stop recording conditions. • Unlimited number of analysis functions (spot, line, area). • File organizer. • Zoom and pan allows a closer look. • Multiple dockable objects for plots and statistics. • Export images and results to bitmap, video, Excel, MATLAB or CSV formats • Local scale gain control on measurement - automatically adjusts the contrast in a specific part of the image.
FLIR ResearchIR Max 4 in combination with a FLIR thermal imaging camera is the perfect solution for any R&D or scientific application. It will allow researchers in all fields to make the smallest of temperature differences visible and to thoroughly analyze the thermal process in real-time.

General description

FLIR ResearchIR Standard 4 is aimed at the R&D benchtop testing environment for users of uncooled cameras. FLIR ResearchIR Standard provides the core analysis tools needed for rapid testing and assessment of thermal issues.

Main features:

- View live imagery from the camera
- Record snapshots or movies to disk.
- Post-processing of fast thermal events.
- Generate time-temperature plots from live images or recorded sequences.
- Analysis by region (spot, line, area).
- File organizer.
- Zoom and pan allows a closer look.
- Multiple dockable objects for plots and statistics.
- Export images and results to bitmap, Excel, or CSV formats

FLIR ResearchIR Standard 4 in combination with a FLIR thermal imaging camera is the perfect solution for any benchtop testing application application.

General description

The FLIR Atlas SDK for .NET is a software development kit that enables developers to create applications. Supported by help files and sample code, developers can add functionality or collaborate with other FLIR products to get the result they want in their application.

Key features:

- Supports communication and streaming using FireWire, Gigabit, RTSP, and USB interfaces.
- Gives the user full control of the camera.
- Supports recording of images using FireWire, Gigabit, RTSP, and USB interfaces.
- Converts 16-bit signal pixels into temperature data, for maximum user flexibility.
- Allows 16-bit temperature linear, histogram, and signal outputs.

General description	
ThermoVision™ System Developers Kit	
Key features:	
<ul style="list-style-type: none"> • Supports communication and broadcasting via FireWire™, Ethernet, and USB interfaces. • Gives the user full control of the camera. • Allows the user to set alarm conditions and measurement functions in the camera • Allows the user to define I/O functionality (FLIR A series). • Based on ActiveX technology. • Supports acquisition of images through FireWire™, Ethernet, and USB interfaces. • Reads from and writes to file in FLIR Systems' proprietary file format and writes to files in FLIR Systems' open floating point format (*.fpf). • Converts 16-bit absolute pixels into temperature pixels and several intermediate types of pixels formats, for maximum user flexibility. Applies to all camera models with temperature measurement capabilities. • Allows 16-bit temperature linear outputs from FLIR A series cameras. • Includes method that allows using individual emissivity value correction on any single pixel or condensed measuring value – e.g. average, minimum etc. • Supports conditional recording to file through FireWire™, Ethernet, and USB interfaces.

General description
ThermoVision™ System Developers Kit
Key features:
<ul style="list-style-type: none"> • Supports communication and broadcasting via FireWire™, Ethernet, and USB interfaces. • Gives the user full control of the camera. • Allows the user to set alarm conditions and measurement functions in the camera • Allows the user to define I/O functionality (FLIR A series). • Based on ActiveX technology. • Supports acquisition of images through FireWire™, Ethernet, and USB interfaces. • Reads from and writes to file in FLIR Systems' proprietary file format and writes to files in FLIR Systems' open floating point format (*.fpf). • Converts 16-bit absolute pixels into temperature pixels and several intermediate types of pixels formats, for maximum user flexibility. Applies to all camera models with temperature measurement capabilities. • Allows 16-bit temperature linear outputs from FLIR A series cameras. • Includes method that allows using individual emissivity value correction on any single pixel or condensed measuring value – e.g. average, minimum etc. • Supports conditional recording to file through FireWire™, Ethernet, and USB interfaces.

General description
<p>Software to manage and control FLIR Systems thermal imaging cameras for security and safety applications</p> <p>FLIR Sensors Manager offers powerful and efficient management capabilities for any security installation with FLIR Systems thermal imaging cameras. FLIR Sensors Manager allows to automatically locate FLIR Systems thermal imaging cameras in the network and to easily control them. Just connect the thermal imaging camera to the network, install FLIR Sensors Manager and hit the "discover" button and you will be able to manage and control the camera. Thanks to FLIR Sensors Manager, the management of FLIR Systems thermal imaging cameras over a network will become extremely easy.</p> <p>FLIR Sensors Manager does not only allow controlling F-, PT- and D-Series thermal imaging cameras. It is also suited for managing thermal imaging cameras with temperature capabilities like the FLIR A310 f and FLIR A310 pt.</p> <p>FLIR Sensors Manager allows you to get the most out of your thermal imaging camera with temperature measurement capability. It is ideal for monitoring critical infrastructure and for preventing fires.</p> <p>FLIR Sensors Manager allows to automatically locate FLIR A310 pt and FLIR A310 f cameras in the network. They can be easily controlled and set-up in a distributed multi-camera environment</p>
<p>FLIR Sensors Manager is available in two different versions: Basic (freeware) and Pro. Depending on your exact needs and your security network, you can choose the version that best fits your system's requirements. A free demo version is available and can be downloaded from our website. After registration, the demo version is converted to the basic version.</p>
<p>The Basic version of FLIR Sensors Manager (freeware) allows to:</p> <ul style="list-style-type: none"> • Discover sensors in the network • Command and control of up to four networked sensors: focus, pan/tilt, zoom • Display network video • Define presets • Manage scan lists • Create panoramas • Configure user profiles(toolbars, layout, etc) • Show thermal images on multiple monitors • Capture images • Geo Mapping
<p>The Pro version of FLIR Sensors Manager contains all the features that are incorporated in the Basic version, plus a number of useful modes that will help you make the most out of your security network.</p>

General description

Video analytics

Allows to perform video analytics within FLIR Sensors Manager. It includes:

- Video Motion Detection: FLIR's pro proprietary algorithm will work on thermal or visible video in the most harsh environments.
- Target detection with alarms based on spatial rules like trip wires crossing or areas triggered by enter, exit or both events.
- Software based video-tracking of moving objects for control of PTZ sensors.

Radar Cueing and radar tracks display

Allows display of real-time position and classification information of radar targets (ID, course, speed, lat/lon, classification, ...) coming from Nexus enabled radars. Allows users to command cameras in advanced radar slave modes (ARPA tracking).

Video wall display

Allows fully configurable video mosaic layouts, supporting both network and analog frame grabber sources. E-stab Provides a steady image. Can be extremely useful when cameras are installed on high poles where they can be affected by wind or vibration.

Software to manage and control FLIR Systems thermal imaging cameras for security and safety applications

FLIR Sensors Manager offers powerful and efficient management capabilities for any security installation with FLIR Systems thermal imaging cameras. FLIR Sensors Manager allows to automatically locate FLIR Systems thermal imaging cameras in the network and to easily control them. Just connect the thermal imaging camera to the network, install FLIR Sensors Manager and hit the "discover" button and you will be able to manage and control the camera. Thanks to FLIR Sensors Manager, the management of FLIR Systems thermal imaging cameras over a network will become extremely easy.

FLIR Sensors Manager does not only allow controlling F-, PT- and D-Series thermal imaging cameras. It is also suited for managing thermal imaging cameras with temperature capabilities like the FLIR A310 f and FLIR A310 pt.

FLIR Sensors Manager allows you to get the most out of your thermal imaging camera with temperature measurement capability. It is ideal for monitoring critical infrastructure and for preventing fires.

FLIR Sensors Manager allows to automatically locate FLIR A310 pt and FLIR A310 f cameras in the network. They can be easily controlled and set-up in a distributed multi-camera environment

FLIR Sensors Manager is available in two different versions: Basic (freeware) and Pro. Depending on your exact needs and your security network, you can choose the version that best fits your system's requirements. A free demo version is available and can be downloaded from our website. After registration, the demo version is converted to the basic version.

The Basic version of FLIR Sensors Manager (freeware) allows to:

- Discover sensors in the network
- Command and control of up to four networked sensors: focus, pan/tilt, zoom
- Display network video
- Define presets
- Manage scan lists
- Create panoramas
- Configure user profiles(toolbars, layout, etc)
- Show thermal images on multiple monitors
- Capture images
- Geo Mapping

The Pro version of FLIR Sensors Manager contains all the features that are incorporated in the Basic version, plus a number of useful modes that will help you make the most out of your security network.

General description

Video analytics

Allows to perform video analytics within FLIR Sensors Manager. It includes:

- Video Motion Detection: FLIR's pro proprietary algorithm will work on thermal or visible video in the most harsh environments.
- Target detection with alarms based on spatial rules like trip wires crossing or areas triggered by enter, exit or both events.
- Software based video-tracking of moving objects for control of PTZ sensors.

Radar Cueing and radar tracks display

Allows display of real-time position and classification information of radar targets (ID, course, speed, lat/lon, classification, ...) coming from Nexus enabled radars. Allows users to command cameras in advanced radar slave modes (ARPA tracking).

Video wall display

Allows fully configurable video mosaic layouts, supporting both network and analog frame grabber sources. E-stab Provides a steady image. Can be extremely useful when cameras are installed on high poles where they can be affected by wind or vibration.

General description

The FLIR Atlas SDK for .NET is a software development kit that enables developers to create applications. Supported by help files and sample code, developers can add functionality or collaborate with other FLIR products to get the result they want in their application.

Key features:

- Supports communication and streaming using FireWire, Gigabit, RTSP, and USB interfaces.
- Gives the user full control of the camera.
- Supports recording of images using FireWire, Gigabit, RTSP, and USB interfaces.
- Converts 16-bit signal pixels into temperature data, for maximum user flexibility.
- Allows 16-bit temperature linear, histogram, and signal outputs.

General description

FLIR ResearchIR Max 4 is aimed at R&D and science professionals who use thermal imaging cameras with a cooled or uncooled detectors. FLIR ResearchIR Max makes the most of a thermal imaging camera, and allows high-speed recording and advanced thermal pattern analysis. FLIR ResearchIR Max is the perfect tool for industrial R&D.

Main features:

- Pre/post-recording.
- Mathematical processing toolbox.
- Image filtering toolbox.
- Radiometric digital detail enhancement (DDE) improves dramatically the understanding of the thermal image, while maintaining radiometric measurement accuracy.
- View, record and store images at high speed.
- Post-processing of fast thermal events.
- Generate time-temperature plots from live images or recorded sequences.
- Advanced start/stop recording conditions.
- Unlimited number of analysis functions (spot, line, area).
- File organizer.
- Zoom and pan allows a closer look.
- Multiple dockable objects for plots and statistics.
- Export images and results to bitmap, video, Excel, MATLAB or CSV formats
- Local scale gain control on measurement - automatically adjusts the contrast in a specific part of the image.

FLIR ResearchIR Max 4 in combination with a FLIR thermal imaging camera is the perfect solution for any R&D or scientific application. It will allow researchers in all fields to make the smallest of temperature differences visible and to thoroughly analyze the thermal process in real-time.

General description

FLIR ResearchIR Max 4.0 is aimed at R&D and science professionals who use thermal imaging cameras with a cooled or uncooled detectors. FLIR ResearchIR Max makes the most of a thermal imaging camera, and allows high-speed recording and advanced thermal pattern analysis. FLIR ResearchIR Max is the perfect tool for industrial R&D.

Main features:

- Pre/post-recording.
- Mathematical processing toolbox.
- Image filtering toolbox.
- Radiometric digital detail enhancement (DDE) improves dramatically the understanding of the thermal image, while maintaining radiometric measurement accuracy.
- View, record and store images at high speed.
- Post-processing of fast thermal events.
- Generate time-temperature plots from live images or recorded sequences.
- Advanced start/stop recording conditions.
- Unlimited number of analysis functions (spot, line, area).
- File organizer.
- Zoom and pan allows a closer look.
- Multiple dockable objects for plots and statistics.
- Export images and results to bitmap, video, Excel, MATLAB or CSV formats
- Local scale gain control on measurement - automatically adjusts the contrast in a specific part of the image.

FLIR ResearchIR Max 4 in combination with a FLIR thermal imaging camera is the perfect solution for any R&D or scientific application. It will allow researchers in all fields to make the smallest of temperature differences visible and to thoroughly analyze the thermal process in real-time.

General description	
<p>The ThermoVision LabVIEW Toolkit is a set of VIs (virtual instruments) for cameras that support alarms, measurement functions, and I/O functionality.</p> <p>Through LabVIEW, you can use these VIs as sub-VIs to manage communications with a FLIR IR camera in digital mode.</p> <p>You can also generate true temperature images from images acquired through LabVIEW, and can use the LabVIEW IR Measurement and Display tools to analyze the temperatures of imaged objects.</p>	
<p>Key features:</p> <ul style="list-style-type: none"> • Set up communications between LabVIEW VI and a FLIR IR camera • Capture and collect images via FireWire or Ethernet interfaces • Adjust the camera configuration parameters and focus as you view a live image • Control the camera calibration • Send any other camera command to the camera • Generate a true temperature image from a 16-bit image acquired using the camera's FireWire or Ethernet interfaces • Close communications to the IR camera 	
<p>Users with licenses for the previous version can download a free upgrade via the following link: http://support.flir.com/SwDownload/app/RssSWDownload.aspx?ID=63</p>	
<p>Note: Only supports National Instrument 32-bit Labview</p>

General description
ThermoVision™ System Developers Kit
Key features:
<ul style="list-style-type: none"> • Supports communication and broadcasting via FireWire™, Ethernet, and USB interfaces. • Gives the user full control of the camera. • Allows the user to set alarm conditions and measurement functions in the camera • Allows the user to define I/O functionality (FLIR A series). • Based on ActiveX technology. • Supports acquisition of images through FireWire™, Ethernet, and USB interfaces. • Reads from and writes to file in FLIR Systems' proprietary file format and writes to files in FLIR Systems' open floating point format (*.fpf). • Converts 16-bit absolute pixels into temperature pixels and several intermediate types of pixels formats, for maximum user flexibility. Applies to all camera models with temperature measurement capabilities. • Allows 16-bit temperature linear outputs from FLIR A series cameras. • Includes method that allows using individual emissivity value correction on any single pixel or condensed measuring value – e.g. average, minimum etc. • Supports conditional recording to file through FireWire™, Ethernet, and USB interfaces.

Specifications	
Input Voltage	Universal AC, 47-63 Hz 90-264 Vac operating range Input current: 1 Arms max.
Input Protection	Inrush current limiting Varistor Internal safety fuse Lower voltage than the specified minimum input will not damage the unit
Isolation	2250 Vdc input to chassis 4300 Vdc input to output 8 mm spacing 500 Vdc output to chassis
Standards	Designed to meet EN60950-1 and related standards
EMI	EN55022 Class A with margins
Switching Frequency	47 kHz \pm 3 kHz
Output Voltage/Current	24 V \pm 0.2 V/2 A Output is floating, either terminal can be grounded
Redundancy Diode	None
Line/Load Regulation	\pm 1% combined from no load to full load.
Dynamic Response	Max 5% voltage deviation for 10% to 50% load step, with better than 1msec recovery time
Output Ripple/Noise	Better than 60 mVrms or 300 mVpp (20 MHz BW)
Output Overload Protection	Rectangular current limiting with hiccup-type short-circuit protection Current Limit: 2.4 A \pm 0.3 A
Output Overvoltage Protection	Transorb installed across the output
Efficiency	85% typical at full load
Operating Temperature Range	-25°C to +50°C cold plate temperature for full specification
Storage Temperature	-40°C to +80°C
Temperature Drift	0.03% per °C over operating temperature range
Cooling	Conduction via base plate to a cold plate and natural convection
Environmental Protection	IP66 enclosure
Shock/Vibration	IEC 61373 Cat 1 A&B
Humidity	100%, condensing

Power supply, 24 VDC, 2 A, 50 W

General description

The FLIR Atlas SDK for .NET is a software development kit that enables developers to create applications. Supported by help files and sample code, developers can add functionality or collaborate with other FLIR products to get the result they want in their application.

Key features:

- Supports communication and streaming using FireWire, Gigabit, RTSP, and USB interfaces.
- Gives the user full control of the camera.
- Supports recording of images using FireWire, Gigabit, RTSP, and USB interfaces.
- Converts 16-bit signal pixels into temperature data, for maximum user flexibility.
- Allows 16-bit temperature linear, histogram, and signal outputs.

General description

The FLIR Atlas SDK for .NET is a software development kit that enables developers to create applications. Supported by help files and sample code, developers can add functionality or collaborate with other FLIR products to get the result they want in their application.

Key features:

- Supports communication and streaming using FireWire, Gigabit, RTSP, and USB interfaces.
- Gives the user full control of the camera.
- Supports recording of images using FireWire, Gigabit, RTSP, and USB interfaces.
- Converts 16-bit signal pixels into temperature data, for maximum user flexibility.
- Allows 16-bit temperature linear, histogram, and signal outputs.

General description

The FLIR Atlas SDK for MATLAB is a software development kit that enables developers to create applications. Supported by help files and sample code, developers can add functionality or collaborate with other FLIR products to get the result they want in their application.

Key features:

- Supports communication and streaming using FireWire, Gigabit, RTSP, and USB interfaces.
- Gives the user full control of the camera.
- Supports recording of images using FireWire, Gigabit, RTSP, and USB interfaces.
- Converts 16-bit signal pixels into temperature data, for maximum user flexibility.
- Allows 16-bit temperature linear, histogram, and signal outputs.
